

SISTEMAS OPERACIONAIS

O que é Docker?

Docker é uma plataforma aberta para desenvolvedores e administradores de sistemas para construir, entregar e rodar aplicações distribuídas.

O Docker permite que as aplicações sejam rapidamente montadas e elimina o atrito e a diferença entre os ambientes de desenvolvimento, testes e produção

O que não é Docker?

Docker não é uma ferramenta de virtualização de máquinas, ele é um ambiente de virtualização de Linux, construído sobre os Linux Containers (LxC), que utiliza a funcionalidade cgroups para criar e rodar ambientes Linux virtuais isolados em um único host.

Iniciando Docker

Registre-se no site <https://www.docker.com/> e faça o login.

Criando Repositório

Em Create Repository, crie um repositório.

Create Repository

1. Choose a namespace (*Required*)
2. Add a repository name (*Required*)
3. Add a short description
4. Add markdown to the full description field
5. Set it to be a private or public repository

Para executar uma imagem em um container:

\$ docker run hello-world

```
[node1] (local) root@192.168.0.28 ~
$ docker run hello-world
Unable to find image 'hello-world:latest' locally
latest: Pulling from library/hello-world
9bb5a5d4561a: Pull complete
Digest: sha256:f5233545e43561214ca4891fd1157e1c3c563316ed8e237750d59bde73361e77
Status: Downloaded newer image for hello-world:latest

Hello from Docker!
This message shows that your installation appears to be working correctly.

To generate this message, Docker took the following steps:
 1. The Docker client contacted the Docker daemon.
 2. The Docker daemon pulled the "hello-world" image from the Docker Hub.
    (amd64)
 3. The Docker daemon created a new container from that image which runs the
    executable that produces the output you are currently reading.
 4. The Docker daemon streamed that output to the Docker client, which sent it
    to your terminal.

To try something more ambitious, you can run an Ubuntu container with:
$ docker run -it ubuntu bash

Share images, automate workflows, and more with a free Docker ID:
https://hub.docker.com/
```

Listar os containers:

```
$ docker ps -a
```

Listar as imagens:

```
$ docker images
```

```
[node1] (local) root@192.168.0.28 ~
$ docker ps -a
CONTAINER ID        IMAGE               COMMAND             CREATED             STATUS              PORTS              NA
